Connected Industry Starter Kit

Experience our all-in-one EasyHandling Starter Kit

Get a preview of the future with Rexroth's EasyHandling Starter Kit. Containing a control, drive and linear axis the starter kit demonstrates the unique benefits of our Connected Industry portfolio in action. See for yourself how our Open Core Interface and its related portfolio bridge industrial programming and high-level languages – along with the other cornerstone innovations of Connected Industry that make automation simpler, faster and more economical.

Open Core Engineering – the enabler of a new era of engineering freedom

Open Core Engineering combines the previously separate PLC and IT worlds into one comprehensive solution portfolio. This portfolio comprises open standards, software tools, function toolkits and the Open Core Interface – everything you need to create future-proof solutions that will substantially simplify workflows and dramatically increase software engineering efficiency.

The Open Core Interface's allows rapid control prototyping, IT automation and individual function creation. It also enables the seamless integration of smart devices for accelerated data exchange and communication.

IndraMotion MLC motion logic control

This fully scalable control for hydraulic, electric and hybrid drives features compact and control-based hardware and high connectivity based on industrial communication standards. It provides a flexible automation platform for modular and object-oriented machine concepts and multi-technological control solutions.

IndraDrive Cs compact servo drives

These highly versatile and extremely compact drives with their universal communication hardware support all standard Ethernet-based communications interfaces, e.g. sercos. The standard firmware can be extended with scalable technology functions, giving users maximum flexibility with minimum engineering effort.

Highlights

- ▶ Open Core Interface
- ▶ IndraMotion MLC
- ▶ IndraDrive Cs
- ▶ Fast networking
- ▶ Smart Device compatible
- ▶ WiFi router

EasyHandling Starter Kit:

Drive start-up

EasyWizard is an assistant that is integrated as a standard feature of Rexroth's engineering framework IndraWorks. It was designed to help users start-up linear systems easily, rapidly and safely. Starting up electromechanical axes often used to be a complicated, time-consuming and error-prone procedure. EasyWizard has changed all that – mechanical data from the system plates are entered in the EasyWizard to quickly align the mechanics and drive in just a few steps. Starting up linear motion systems has never been easier.

Conclusion:

Now is your chance to experience Connected Industry at your own pace and on your own terms. Enjoy!
